

October 7, 2022

Dear CPS Energy Customer:

Thank you for allowing us to serve your energy needs. We are reaching out to inform you about an upcoming project at 14385 State Highway 16 S. This enhancement to our infrastructure consists of constructing a new switching station and rerouting the existing high-voltage transmission lines in the area to support electric reliability in your neighborhood. We do not anticipate any power outages while the work is being performed.

Construction is expected to begin this month, October 2022. The contractor will be clearing and grading property, installing fencing, installing new foundations, replacing transmission line foundation, towers and wire, and installing station tubular steel structures and equipment. The expected project duration is approximately three (3) years.

The project should have little or no impact on your property. All of the construction activities associated with this project, are located within our property, easements or public street right-of-ways.

If you have any questions or concerns about this important project, you may contact me at (210) 289-9685 or by email at dtotto@cpsenergy.com.

We appreciate your patience and understanding while we complete this work to better serve you.

Sincerely,

Daniel Otto, P.E., PMP, MBA
Senior Project Manager
Project Management & Performance Improvement
